

# FEATURES AND BENEFITS

## TOUGH BUILT FRAMES

Our “tough built” treated timber frames have triple reinforced corners, cross-bracing and supports under every seat. The entire frame is then protected by chemical treatment, paint and a wrap-around base. Our Oasis Whitehaven Spas and all Oasis Swim Spas have a galvanised steel frame for extra strength.

## 100SQFT BOOST FILTRATION

Filtration is a major part of water maintenance so we use a “Max Flow” valve and a huge 100sqft dual cartridge filter system to ensure more water is filtered every day. Then we add dual pump technology – where a 3HP massage pump draws massive amounts of water through the second filter during use to ensure superior filtration and water clarity.

## DREAMTIME LIGHTING

All Oasis Spas come with the dreamtime lighting package, including a Large LED Light and perimeter lighting. With over 14 different colour sequences, creating chromotherapy for relaxation and a kaleidoscope of colours throughout your spa. Choose a lighter colour spa shell to get the full lighting experience.

## **WTC CIRCULATION PUMP**

Our high flow WTC circulation pump features low speed operation but delivers a larger flow. Its low speed operation allows it to be less abrasive, long lasting, energy efficient and super quiet. Suitable for continuous filtration and circulation of spas and swim spas. You can be sure your spa meets even the most stringent energy regulations while minimising operating expenses.

## **WATERFALL**

Enjoy the soothing sound of running water with our waterfall feature. All Oasis Spas come with either a cascade or Roman waterfall. Creating the perfect ambiance whilst relaxing in your spa.

## **HIGH DENSITY INSULATION**

Every spa has a layer of high density “closed cell” (waterproof) foam sprayed onto the inside of the spa shell to stop heat loss from the water. Plus multi-layer insulation on the inside of the “no gap” cabinet panels to reduce power usage further.

- High density thermo-wood cabinet cladding • High density closed-cell foam on the shell.
- Fibreglass base • High density thermal hard cover • “No gap” cabinet.

# FEATURES AND BENEFITS

## “NO GAP” CABINET

If your spa has large gaps between the cabinet and the spa shell, the heat inside the cabinet escapes and cold air enters your spa, causing the heater to turn on more often to maintain heat. Pests and insects can also enter and damage your spa. We tailor make every cabinet so there are minimal gaps, trapping the heat in. Without this feature, you are simply throwing money away.

## HIGH DENSITY HARD COVER

All Oasis Spas include a high density lockable cover that stops heat loss from the water by trapping heat under the cover making sure it does not escape.

## MULTIFUNCTION CONTROL SYSTEMS

Our “set and forget” multi function control system automatically makes sure your spas water is always clean and ready to use . The “lockout” mode stops your kids and neighbours using the spa when you don’t want them to and “economy” mode makes sure your spa is economical to run whilst you are away.

## “TOUGH BOND” ACRYLIC SHELL

Our 8-10mm thick shell made with American Lucite or Aristech acrylic with our 6 Layer fibreglass resin construction cured in a temperature and humidity controlled environment. With this process Oasis Spas have the superior strength and durability necessary to last.

## **THERMO-WOOD CABINET**

Our high density synthetic wood cabinet has a high level of insulation to stop heat escaping through the walls of your spa cabinet.

## **SOLID FIBREGLASS BASS**

A solid wrap-around fibreglass base on the bottom of your spa adds massive strength to the spa overall, keeping pests and weather out, and allows us to fit a multi-stage insulation system at ground level that saves you money.

## **EASY-CARE JETS**

Spinning jets are awesome, but to keep them spinning, most brands of jets have to be removed and cleaned regularly to clear the bearings of grit, chemical residue and body oils. Our jets spin on a floating stainless steel shaft so there are no bearings to fail. The screw in/screw out feature means there are no clips to break. The tough construction also means a long life and resistance against chemicals.

## **MORE ROOM AND MORE COMFORT**

Oasis Spas have less wasted space around the edges of the spa which means more internal room for greater comfort. Complete with bigger footwells, there's plenty of room for everyone's feet. Our ergonomic seating plus contoured recliner lounges support your body and stop you from floating.

## OPTIONAL UPGRADES

### ULTRA ZONE

Combining ozone generation with UV-C sterilisation – the ozone is generated via corona discharge and then injected into the UV chamber. The UV reacts with the ozone to create a powerful oxidiser inactivating bacteria, burning off unwanted organic matter, resulting in crystal clear, clean water.

### GECKO IN.TOUCH

The ultimate wireless remote control for your spa. In.Touch allows you to access the functions and features of your spa, even if you are away from home. Notifications keep you informed on the status of your spa, even when the app is not open. Allowing you to control your Oasis Spa from your phone or tablet.

### GECKO IN.STREAM STEREO

Streamed from your spa, your favorite music never sounded so good! Designed to deliver clean, crisp rich sound in the high-fidelity rendition expected by music lovers, in.stream features Class D amplifier technology to enhance your outdoor audio experience.

## SPA AND CABINET COLOURS

In addition to Lucite Acrylic's excellent gloss and colour retention, surfaces are naturally impervious to microbes. The non-porous nature of Aristech's acrylic defends against the penetration and subsequent growth of microorganisms on its surface. Oasis Spas are shielded against microbes, easy to clean and durable. *\*Gypsum not available for Islander.*
